Jessica- don't think so, but does submission include cited (not submitted) product chemistry studies.

Many Thanks,  
Tony Kish

Tony,

Thank you for your feedback. I will communicate this to my team. You can expect to see the import tolerance in the next few days. Since there is a significant amount of residue data that has already been reviewed by the EU, do think it is possible to reduce the PRIA timing at all?

Thanks,  
Jessica

Jessica- your proposed import submission does not qualify for the new import tolerance process because it involves EPA reviewing new Canadian residue data that no other Authority has previously reviewed. The pilot program applies when residue data has already been reviewed by another regulatory Authority. The EU review will be used but there is no PMRA review of the new Canadian residue data which EPA can use.

Many Thanks,  
Tony Kish

**Subject:** Eastman/Taminco Import Tolerance Transmittal Document

Hello Tony,

I want to thank you again for taking the time to meet with us last week. Per our discussion, I have attached the transmittal document we intent to submit with our import tolerance for chlormequat chloride on wheat, barley, and oats. Please let me know if you need any additional information from me to determine if we would be a good candidate for the pilot program for import tolerances. If we do decide to move forward with the pilot program, we are hopeful that the PRIA timing will be reduced since the EU risk assessment will be included. My team would like to make a decision on whether we move forward with the pilot program or the standard PRIA action by the end of this week. It is my goal to have it to EPA as soon as possible. Please let me know what you think.

Regards,

Jessica McLaughlin
